michal.valko@inria.fr
+33 3 59 57 7801

- EXPERIENCE ♦ **DeepMind**, Paris, France,
Staff Research Scientist (2019 – ...)
- ♦ **ENS Paris-Saclay – Master 2 MVA**, Paris-Saclay, France
External Lecturer - CEV (2014 – ...)
- ♦ **Inria – team SequeL**, Lille, France
Experienced Junior Scientist - CR1/CRCN (2013 – ...)
External Collaborator - CR1/CRCN (2019 – ...)
- ♦ **Inria – team SequeL**, Lille, France
Junior Scientist - CR2 (2012 – 2013)
- ♦ **Inria – team SequeL**, Lille, France
Postdoctoral Researcher (2011 – 2012), Advisor: *Rémi Munos*
- ♦ **Intel Research**, Santa Clara, CA, USA
Research Intern (2009, 2010), Advisor: *Branislav Kveton*
- TEACHING ♦ **Graphs in machine learning**, École normale supérieure de Paris-Saclay, Cachan, France,
Since 2013/2014, graduate course \approx 60–90 students
- EDUCATION ♦ **École normale supérieure de Paris-Saclay**, Paris-Saclay, France
HdR in Mathematics, June 2016.
Thesis: *Bandits on Graphs and Structures*, Jury: *Nicolas Vayatis, Aurélien Garivier, Vianney Perchet, Nicolò Cesa-Bianchi, Gábor Lugosi, Mark Herbster, Rémi Munos*
- ♦ **University of Pittsburgh**, Pittsburgh, PA
PhD in Machine Learning, August 2011.
Thesis: *Adaptive Graph-Based Algorithms*, Advisor: *Milos Hauskrecht*
- ♦ **Comenius University Bratislava**, Slovakia
MSc., summa cum laude in Computer Science, June 2005.
Majors: Artificial Intelligence and Mathematical Methods of CS
Thesis: *Evolving Neural Networks for Statistical Decision Theory*, Advisor: *R. Harman*
- SELECTED AWARDS Inria award for scientific excellence: Prime d’excellence scientifique (2018 - 2021)
Inria award for scientific excellence: Prime d’excellence scientifique (2014 - 2017)
International Conference on Machine Learning *Top 10* Reviewer Award (2018)
International Conference on Machine Learning Reviewer Award (2015)
Distinguished Alumni of Comenius University, Slovakia (2015)
Google best paper of online learning in vision (2010)
Homer Warner Award by AMIA and OMG (2010)
Compunetix Best Research Award at Computer Science Department (2008 and 2011)
University of Pittsburgh Honors Convocation Recognition (2009)
Andrew Mellon Predoctoral Fellowship (Fall 2008, Summer 2009)

Slovak Academy of Sciences Fellowship (2003 – 2005)

- INVITED TALKS ◇ *Bootstrap your own latent*, Presented on September 11th, 2021 at DataFest Yerevan (**DataFest 2021**)
- ◇ *Bootstrapped representation learning on graphs*, Presented on June, 23rd 2021 at Science Academy of Turkey Machine Learning Summer School (**BAYÖYO 2021**)
- ◇ *Graphs in Machine Learning*, Invited guest lecture at Medical University Graz, Austria, June 2021 (**HCAI 2021**)

- ◇ *Bootstrap Your Own Latent: A new approach to self-supervised learning* Presented in January 2021 at MIST conference in Rajecská Lesná (MIST 2021)
- ◇ *Bootstrap Your Own Latent: A new approach to self-supervised learning*, Presented in December 2020 at Reinforcement Learning seminar at Polish Academy of Sciences (PAS 2020)
- ◇ *Bootstrap Your Own Latent: A new approach to self-supervised learning*, Presented in December 16th, 2020 at Google, (GOOG 2020)
- ◇ *BYOL works even without batch statistics* Presented in December 2020 at Deep learning seminar at UPJS, Košice, Slovakia (UPJS 2020)
- ◇ *Reinforcement learning* (minicourse), Presented during Math of Machine Learning Winter School during in February 19-18, 2020 in Sochi, Russia (Sochi 2020)
- ◇ *Graphs are the new gold: The power of graphs in speeding up online learning and decision making*, Presented during October 16-18, 2019 in FAST, Yerevan, Armenia (GIF 2019)
- ◇ *Gaussian process optimization with adaptive sketching: Scalable and no regret*, Presented during September 26-28, 2019 at Recent developments in kernel methods, UCL, London, UK (LanDeep 2019)
- ◇ *Rotting bandits are not harder than stochastic ones*, Presented during September 25-26, 2019 in Lancaster and Deepmind Bandit Workshop, Imperial, London, UK (LanDeep 2019)
- ◇ *Graphs are the new gold: The power of graphs in speeding up online learning and decision making*, Presented on July 23th, 2019, for Cisco in Kraków, Poland (Cisco 2019)
- ◇ *How the negative dependence broke quadratic barrier for learning with graphs and kernels*, Presented July 5th, 2019 at Yandex HQ, Moscow, Russia (Yandex 2019)
- ◇ *Invited talk on research achievements in machine learning*, Presented during July 3-8th, at RAAI Summer School, Moscow Institute of Physics and Technology, Russia (RAAI 2019)
- ◇ *How the negative dependence broke quadratic barrier for learning with graphs and kernels*, Presented during June 14-15th, at ICML workshop on negative dependence, Long Beach, California, USA (ICML 2019)
- ◇ *Active block-matrix completion with adaptive confidence sets*, Presented on May 28th, 2019 at Comenius University in Bratislava, Slovakia (CU 2016)
- ◇ *10-year road to breaking the quadratic barrier for graphs and matrices*, Presented on February 22nd, 2019 at Comenius University in Bratislava, Slovakia (CU 2016)
- ◇ *Graphs are the new gold*, Presented on February 20th, 2019 at P.J. Šafárik University in Košice, Slovakia (UPJS 2016)
- ◇ *The power of graphs in speeding up online learning and decision making*, Presented on January 25th, Department of Pure Mathematics and Mathematical Statistics, University of Cambridge, UK (Cambridge 2019)
- ◇ *The power of graphs in speeding up online learning and decision making*, Presented on January 8th, Verimag, CNRS Grenoble, France (CNRS 2019)
- ◇ *A simple parameter-free and adaptive approach to optimization under a minimal local smoothness assumption*, Presented on January 7th, Verimag, CNRS Grenoble, France (CNRS 2019)
- ◇ *The power of graphs in speeding up online learning and decision making*, Presented on October 23rd, DeepMind, London, UK (DeepMind 2018)
- ◇ *Active block-matrix completion with adaptive confidence sets*, Presented on September 10-13th, 2018, International Workshop on Optimization and Machine Learning, CIMI, Toulouse (CIMI 2018)
- ◇ *Online influence maximization*, Presented on May 14th, 2018, Workshop on Graph Learning, LINC, Paris (LINC 2018)
- ◇ *Recommender systems*, Presented on March 22nd, 2018, Journée Big data, Polytech'Lille (Polytech'Lille 2018)

- ◇ *Pliable rejection sampling*, Presented on February 8th, 2018 at GDR Isis, Télécom ParisTech in Paris (ISIS 2018)
- ◇ *Graph Bandits*, Presented on January 7th, 2018 at MIST conference in Rajecská Lesná (MIST 2018)
- ◇ *SequeL, graphs in ML, and online recommender systems*, Presented on November 9th, 2017 at Plateau Inria Euratechnologies in Lille, France (Euratechnologies 2017)
- ◇ *Sequential sampling for kernel matrix approximation and online learning* Presented on September 19th, DeepMind, London, UK (DeepMind 2017)
- ◇ *Active learning on networks and online influence maximization*, Presented on September 18th, 2017, Decision Theory and Network Science: Methods and Applications, Lancaster, UK (STOR-i 2017)
- ◇ *Side observation in graph bandits*, Presented on July 11th, 2017, ICML 2017 workshop on Picky Learners, Sydney, Australia (ICML 2017)
- ◇ *Distributed sequential sampling for kernel matrix approximation*, Presented on June 28th, 2017, L'Institut de Mathématiques de Toulouse, France (IMT 2017)
- ◇ *Online sequential solutions for recommender systems*, Presented on June 14th, 2017 at Journées Scientifiques Inria 2017 in Nice, France (JS 2017)
- ◇ *Comment maximiser la détection des influenceurs sur les réseaux sociaux ?*, popularization talk, Presented on May 30th, 2017 at 13 France (Inria 13:45 2017)
- ◇ *Where is Justin Bieber?*, Presented on March 30th, 2017 at Dating day in Lille, France (Dating 2017)
- ◇ *Distributed sequential sampling for kernel matrix approximation*, Presented on March 22nd, 2017, for Universität Potsdam at Amazon (Berlin 2017)
- ◇ *Graphs in online machine learning*, Presented on December 21st, 2016 at Textkernel talk series in Amsterdam, Netherlands (TK 2016)
- ◇ *Where is Justin Bieber?*, Presented on September 22nd, 2016 at Comenius University in Bratislava, Slovakia (CU 2016)

Taken private lessons with Noémi Capron (2013 – now), Maurice Bourbon (2012–2015), Richard Earl Teaster (2007 – 2011), and Claudia Pinza (2007)

- RESEARCH
PROJECTS

- ◇ **Graph Bandits** with Gergely Neu, Tomáš Kocák, Rémi Munos, Shipra Agrawal, Alexandra Carpentier, Branislav Kveton, Zheng Wen (2013 - present)
 Bandit problems are online decision-making problems where the only feedback given to the learner is a (noisy) reward of the chosen decision. In early sequential decision-making research, we treated each of the decisions independently. While this is enough when the number of actions is very small, it becomes impractical (both theoretically and in practice) when the set of potential actions comprises larger sets, such as a set of movies or products in a recommender system. The minimax regret guarantees scale as $\Theta(\sqrt{NT})$ where N is the number of actions and T is the time horizon. If N happens to be large (such as the number of movies that is in millions), these guarantees are weak. Luckily, the problems become easier if there is efficient information sharing between the actions. For graphs structure, We study the benefits of homophily (similar actions give similar rewards) under the name spectral bandits, side information (well-informed bandits), and influence maximization (IM bandits). In the algorithms, we take advantage of these similarities in order to (provably) learn faster. With respect to the guarantees my colleagues and I derived, we replaced N (number of actions = number of nodes in a graph) with some graph-dependent quantity, possibly smaller than N if the graph structure is helpful.
 - ◇ **SQUEAK: Online sparsification of kernels and graphs** with Daniele Calandriello, Alessandro Lazaric, Yiannis Koutis (2009 - 2018)
 My PhD thesis ended with an open direction, whether efficient spectral sparsifiers can

fuel online graph-learning methods to make online learning with similarities even possible, i.e., with guaranteed performance and non-increasing time-step complexity. In the offline case, this was done already by Spielman et. al (2004). The difficulty of the online case is that we need to deal with the relevance of the data that we have not seen yet. For the problem of spectral approximation in a RKHS, we introduce the first dictionary-learning streaming algorithm that operates in a single-pass over the dataset. Previous results (Alaoui and Mahoney, 2015; and Bach 2013) had either a quadratic-time complexity, or a space complexity that scaled with the coherence of the dataset, a quantity always larger than the effective dimension. Prior methods have also two major drawbacks: (1) they require multiple passes over the data or alternatively random access to the dataset, and (2) they have inherent bottlenecks that make it difficult to parallelize them. We introduce a new single-pass streaming RLS sampling approach that sequentially constructs the dictionary, where each step compares a new sample only with the current intermediate dictionary and not all past samples. We prove that the size of all intermediate dictionaries scales only with the effective dimension of the dataset, and therefore guarantee a per-step time and space complexity independent from the number of samples. This reduces the overall time required to construct provably accurate dictionaries from quadratic to near-linear, or even logarithmic when parallelized. Finally, for many non-parametric learning problems (e.g., K-PCA, graph SSL, online kernel learning) we show that we can use the generated dictionaries to compute approximate solutions in near-linear that are both provably accurate and empirically competitive.

- ◇ **Sample efficient Monte-Carlo tree search: TrailBlazer, SmoothCruiser, StoSOO, POO, and OOB** with Jean-Bastien Grill, Rémi Munos, Alexandra Carpentier (2011 - now) Monte-Carlo planning and Monte-Carlo tree search has been popularized in the game of computer Go (Coulom 2007, Gelly 2006, Silver 2016) and shown impressive performance in many other high dimensional control and game problems (Browne 2012). The empirical success of UCT on one side but the absence of performance guarantees for it on the other, incited research on similar but theoretically founded algorithms. Our first contribution are generic *black-box function optimizers* for extremely difficult functions (extremely nonsmooth, no derivatives?) with guarantees with main application to hyper-parameter tuning. The second set of contributions in *planning*. The first example is *TrailBlazer*, adaptive planning algorithm in MDPs (Markov decision process).
- ◇ **Adaptive structural sampling** with Alexandra Carpentier, Andrea Locatelli, Akram Erraqabi, Alessandro Lazaric, Rémi Bardenet, Guillaume Gautier (2013 - 2020) Many of the sequential problems require adaptive sampling in some particular way. One example is using learning to improve rejection rate in rejection sampling by learning the proposal. [Erraqabi et al. ICML 2015]. Another one is sampling with two contradictory objectives such as when we have to trade off reward and regret [Erraqabi et al. AISTATS 2016]. Other examples include extreme [Carpentier and Valko, NeurIPS 2014] and infinitely many-arm bandits. [Carpentier and Valko, ICML 2015]. Finally, we have worked on an efficient sampling of determinantal point processes [Gautier et al, ICML 2016] and applying them to diverse recommendation and numerical integration.
- ◇ **Semi-supervised apprenticeship learning** with J. Audiffren, Mohammad Ghavamzadeh and Alessandro Lazaric, (2011 - now) In apprenticeship learning we aim to learn a good behavior by observing an expert or a set of experts. We assume a setting where the expert is maximizing an unknown true reward function, which is often a linear combination of known state features. We consider a situation when we observe many trajectories of behaviors but only one or a few of them are labeled as experts' trajectories. We investigate the assumptions under which the remaining unlabeled trajectories can aid in learning a policy with a good performance.
- ◇ **Composing Learning for Artificial Cognitive Systems** with Rémi Munos, Mohammad Ghavamzadeh, Alessandro Lazaric, and Daniil Ryabko (2011 - 2015) The purpose of this project is to develop a unified toolkit for intelligent control in many

different problem areas. This toolkit will incorporate many of the most successful approaches to a variety of important control problems within a single framework, including bandit problems, Markov Decision Processes (MDPs), Partially Observable MDPs (POMDPs), continuous stochastic control, and multi-agent systems.

- ◇ **Large-scale semi-supervised learning** with Branislav Kveton, A. Saluja (2010 - 2013)
We parallelized online harmonic solver to process 1 TB of video data in a day. I am working on the multi-manifold learning that can overcome changes in distribution. I am showing how the online learner adapts as to characters' aging over 10 years period in Married ... with Children sitcom. My research was part of Everyday Sensing and Perception (ESP) project.
- ◇ **Anomaly detection** with Milos Hauskrecht (2007 - 2011)
Statistical anomaly detection methods for identification of unusual outcomes and patient management decisions. I combined max-margin learning with distance learned to create and anomaly detector, which outperforms the hospital rule for Heparin Induced Thrombocytopenia detection. I later scaled the system for 5K patients with 9K features and 743 clinical decisions per day. At the recent study, from 222 alerts 50% were highly relevant.
- ◇ **Online semi-supervised learning** with Branislav Kveton (2009)
Extended graph-based semi-supervised learning to the structured case and demonstrated on handwriting recognition and object detection from video streams. Regularized harmonic function solution: The algorithm outputs a confidence of inference and uses it for learning. I came up with an online algorithm that on the real-world datasets recognizes faces at 80–90% precision with 90% recall.
- ◇ **Odd-Man-Out** with Wendy Chapman, Roger Day and Gregory Cooper (2007 - 2011)
We hypothesized that clinical data in emergency department (ED) reports would increase sensitivity and specificity of case identification for patients with an acute lower respiratory syndrome (ALRS). We designed a statistic of disagreement (odd-man-out) to evaluate the machine learning classifier with expert evaluation in the cases when the gold standard is not available.
- ◇ **High-throughput proteomic and genomic data and biomarker discovery** with Milos Hauskrecht, Richard Pelikan, Shuguang Wang (2005 - 2007)
We built a framework for the cancer prediction from high-throughput proteomic and genomic data sources. I found a way to merge heterogeneous data sources: My fusion model was able to predict pancreatic cancer from Luminex combined with SELDI with 91.2% accuracy.
- ◇ **Evolutionary feature selection algorithms** with Nuno Marques (2005)
I enhanced the existing FeaSANNT neural feature selection with spiking neuron model to handle inputs noised with up to 10% Gaussian noise.
- ◇ **Plastic Synapses** with Juraj Pavlasek (2003 - 2005)
I was modelling basic learning function at the level of synapses. I designed a model that is able to adapt to the regular frequencies with different a rate as the time flows. I used genetic programming to find biologically plausible networks that distinguish different gamma distribution and provided explanation of the strategies evolved.
